

DELIVERING
CRITICAL
SERVICES

Trusted to Deliver the Future of
Military Air Traffic Management

Ensuring military aircraft can operate as safely and efficiently as possible is paramount, and a responsibility few organisations can aspire to. But at Aquila it is what we do every day, and our customers know they are in safe hands. We have a proven track record as the UK Ministry of Defence's (MoD's) trusted partner for the delivery of support and services in military Air Traffic Management (ATM). Using our team of world-class industry partners, we deliver the latest generation of ATM technologies to ensure the long-term security and longevity of future operations.

And it is not just about the delivery of the latest technology – Aquila also has an unrivalled capacity to provide support and services in the ATM domain. Our innovative support model comprises a network of highly qualified ATM technicians – based across the UK and internationally, and backed up by a 24/7/365 service desk – who provide our customers with a rapid response to technical issues on Programme Marshall and beyond.

Prime Contractor to the MOD for Programme Marshall

- Marshall will deliver a modernised and full suite of ATM systems at military airfields in the UK and overseas
- Marshall's scope covers new control tower equipment such as radar displays, ground-to-air radios, voice communication, control systems and record & replay equipment, plus navigation and landing aids, and deployable ATM systems
- Marshall will provide a cost effective and sustainable ATC service for the UK MoD until 2037 and an enabling pathway to adopt future, next-generation technologies
- Marshall also mitigates against the longer term risk of legacy equipment no longer being supported by one or more systems providers

Our scale offers the advantage of greater organisational agility and a more competitive cost base

Delivering real benefits

- Restructure 'piecemeal' support contracts, whilst ensuring that CNS equipment can continue to be maintained to the highest standards
- Re-deploy resources to other priority tasks, freeing up spare capacity and reducing headcount
- Re-focus resource more effectively through the use of a 'Whole Force' concept
- Optimise existing procurement and support solutions in the pursuit of cost savings
- Leverage experience on Programme Marshall to support windfarms, air defence projects and support Queen Elizabeth Class carriers for the Royal Navy

An unrivalled set of military ATM capabilities

- We act as a 'one-stop shop' for end-to-end military ATM solutions
- Our optimised UK-wide maintenance capability is supported by multiple locations using a regional 'hub and spoke' model
- This is backed up by Service Level Agreements and Key Performance Indicators to ensure full performance compliance – for instance through the use of availability based offerings

Why Aquila?

- We are an integrator of systems offering the best-of-the-best turnkey solutions from world-class equipment providers
- We support Communication, Navigation & Surveillance (CNS) systems across all regions of the UK as well as in Cyprus, Gibraltar and the Falkland Islands
- Our centralised service desk and reporting structures ensure the fastest possible response times
- Our engineers are fully Air Traffic Safety Electronics Personnel (ATSEP) qualified
- Our scale offers the advantage of greater organisational agility and a more competitive cost base, compared to our rivals
- We can tap into the extensive experience and capability of systems suppliers and operators, and a world class team of industry partners
